

EFEKTYWNY™ pondoxygenation

for maximum oxygenation of ponds on golf courses, farms, drainage ponds, ponds in parks, at the castle moats, stormwater systems, etc..

EFEKTYWNY™ pond and lake whid aerator oxygenates the water, with the pressurization of a pump supplying cutting area of the tower with 2 kg pressure, which is then blown out at 1m depth, **inpumpat** water is available at about 6 m deep on the depth is sufficient.

The device consists of floating blocks carrying the 260 kg, and **ustrustnin - gene** weighing a total of 120 kg. There is electricity in the central plant with motor protection, and lights that visually seen from the shore when something is wrong. The unit supplied with power from land 380/400 V, 16/32 amp connection and secured with four pieces of grapnels pond bottom, or with **wirar** in the country.

Standard sizes with flow is 8 m³ / h, 16m³ / h, 29m³ / h 50 / h Larger sizes can be produced.

Good results

Good results were achieved with aeration and oxygenation in ponds with low oxygen content and pH, with cutting pumps water through the press area **Efektywny™** tower, which has the

capacity to administer oxygen with a saturation of 100%.

It has been found in the test run, conducted in's Golf Course, Djupadal, that after fourteen days you could visually see that the view of the water had improved, so that you can see down to 1.5 m deep and were initially visibility in the water 0, 25 m.

After three weeks, the algae started to come loose from the rocks on the bottom.

Environmentally friendly

Benefits of oxygenation of the water.

- When the water used for irrigation of grass on golf courses, you get a better balance with more water for the lawn.
- A healthier environment, the water does not smell.

Invisible installation all under water, only the intake manifold and **elatumatiken** cabinet is visible

Oxygenation of the little pond, Castle Park in Malmo by **Efektywny™** aerator. Oxygen content prior to installation was 3.9 mg / L of 40% saturation after 14 days the oxygen level is 8.8 mg / L 21.9 C°, corresponding to 100% oxygen saturation.
